

Question 1:

Steps of trying to solve the problem:

1. Read the error message: It says there's a syntax error on line 3 at position 14 and that an unexpected '(' was found.
2. Check line 3: Examine the code on line 3 around position 14 to see if there's a typo or missing character.
3. Verify syntax rules: Ensure the code follows the syntax rules of the programming language being used.
4. Debug: Use debugging tools to isolate the problem and understand why the error is occurring.
5. Compare code: Compare the code on line 3 with similar code snippets to see if anything stands out as incorrect.
6. Update code: Make necessary changes, test the code to ensure it runs without errors.

Question 2:

Answer: See question2Result. Csv file

Code:question2.py

Question 3:

Answer and code: question3.py
